

Three phase motors

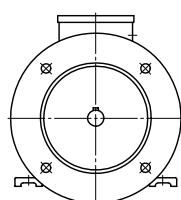

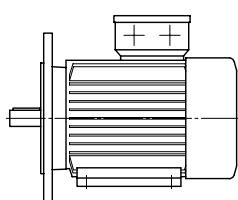

KEB

Foot mounted version
Example: DL80G4 – B3

Flange mounted version
Example: DA132M4 – B5

Foot - Flange mounted version
Example: DL90S4 – B3/B5

Three phase motors

Technical characteristics

The motors correspond to the following standards:

DIN EN 60034	Rotating electrical machines, rating and performance.
IEC60072	Totally enclosed fan-cooled motors with squirrel cage, fixing dimensions and allocation of rating.
DIN42948	Mounting flanges for electrical machines

In the standard version the motors have insulation class F. Insulation class H is available.

Voltage/Frequency

DL63 .. DL112	DA132 .. DA200
• 230/400V Δ/Y 50Hz	• 230/400V Δ/Y 50Hz
• 220-240/380-420V Δ/Y 50/60Hz	• 220-240/380-420V Δ/Y 50/60Hz
• 275/480 V Δ/Y 60 Hz *)	• 275/480 V Δ/Y 60Hz *)
• 230/460V 60 Hz	• 230/460V 60Hz
400/690 V Δ/Y 50 Hz	• 400/690 V Δ/Y 50 Hz
380-420/660-690 V Δ/Y 50 oder 60 Hz	• 380-420/660-690 V Δ/Y 50/60Hz
480V 60Hz *)	• 480V 60Hz *)
290/500 V Δ/Y 50Hz	500V Δ 50Hz
200V 50Hz / 220V 60Hz	200V 50Hz / 220V 60Hz

- Standard voltages

*) Power and speed are increased by about 20%.
Different voltages and frequencies are available.

Motor Power Pn

The values given in the tables are valid for the following conditions:

- Duty cycle S1
- Maximum ambient temperature +40°C
- Installation altitude up to 1000m above mean sea level

The available motor power for different conditions is calculated as follows: $P = P_n \cdot f_s \cdot f_t \cdot f_h$

Factor fs for different duty type

Duty type		fs
S1	Continuous duty. Operation with constant load. The motor reaches the thermal equilibrium.	1.0
S2-10min		1.4
S2-30min	Short term duty. Operation with constant load followed by a stop. During the stop the motor returns to the ambient temperature. Described by the duration of the load period in min.	1.25
S2-60min		1.1
S3-15%ED		1.4
S3-25%ED	Intermittent periodic duty. Operation with a sequence of identical cycles including a time of operation with constant load and a stop. Described by the cyclic duration factor in %.	1.3
S3-40%ED		1.2
S3-60%ED		1.1
S4 .. S10	Intermittent periodic duty. The start or stop phase of the motor is effecting the temperature raise. More data of the duty cycle are necessary.	On request

Factor ft for different ambient temperature θ

$\theta \leq 40^\circ\text{C}$	ft=1.0
$40^\circ\text{C} < \theta \leq 50^\circ\text{C}$	ft=0.87
$50^\circ\text{C} < \theta \leq 60^\circ\text{C}$	ft=0.75

Factor fh for different altitude h

$h \leq 1000\text{m}$	fh=1.0
$1000\text{m} < h \leq 2000\text{m}$	fh=0.95
$2000\text{m} < h \leq 3000\text{m}$	fh=0.87
$3000\text{m} < h \leq 4000\text{m}$	fh=0.80

Three phase motors

Type of protection IP

IP	1. Code number Protection against foreign objects	2. Code number Protection against water
0	Not protected	Not protected
1	Protected against solid foreign objects \varnothing 50 mm and larger	Protected against dripping water
2	Protected against solid foreign objects \varnothing 12 mm and larger	Protected against dripping water if the housing is tilted by up to 15°
3	Protected against solid foreign objects \varnothing 2.5 mm and larger	Protected against spraying water
4	Protected against solid foreign objects \varnothing 1 mm and larger	Protected against splash water
5	Protected against dust	Protected against water jets
6	Dust-proof	Protected against powerful water jets
7		Protected against intermittent immersion in water
8		Protected against sustained immersion in water

In the standard version the motors have protection IP55 (braked motors IP54).

With the option „Dust and water protected“ the motors are IP65. Motors with higher protection standard on request.

Motor-Options

B - Brake COMBISTOP

- spring-loaded twin-disc safety brake
- fail-safe brake
- asbestos-free friction linings
- Protection standard: IP54
- connection via contacts in terminal box
- adjustment provision for wear of friction linings without dismantling
- torque reduction possible
- Standard voltages: 230VAC, 400VAC, 24VDC

Options:

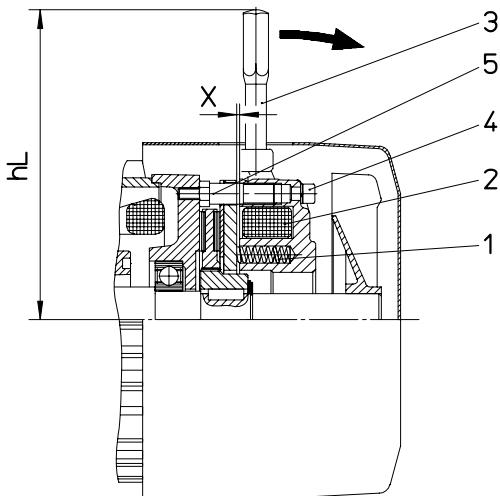

- Manual brake release MB
- CSA approved version
- Corrosion-proof version
- Quick-acting rectifier „Powerbox“ for switch cabinet mounting
Depending on the type of application, this rectifier improves the off period, or the on period, or the service life of the brake before readjustment of the air gap is required.

Mode of Operation

The brake is released by direct-current excitation of the brake coil (2) or by a manual release unit MB (3) which can be attached as an option.

Braking is achieved in power off condition by means of spring force (1).

The adjusting screws (5) are used to adjust the nominal air gap (X) in case of wear.

- Mbr Static braking torque after completed run-in phase
 Mbred possible reduced brake torques
 JB Inertia
 P20 Excitation rating at 20°C
 t2 Release time, time from connecting the current to the beginning of torque decrease
 t11~ Engagement delay time for AC side switching (Fig. 1,3)
 t11= Time from disconnecting the current to the raise of the torque
 WR0.1 Engagement delay time for DC side switching (Fig. 2)
 WRmax Time from disconnecting the current to the raise of the torque
 X friction work until 0.1mm abrasion
 Xn permissible friction work for emergency stop from 3000 1/min (B08..B10 - 1500 1/min)
 Nominal clearance
 Clearance, at which a readjustment is recommended

The specified switching times apply to nominal clearance and nominal torque. It relates to average values and depends on the type of rectification and coil temperature.

Motor-Options

Electrical Connection

Figure 1: AC side switching

- The brake is switched independent from the motor voltage, Engagement delay time $t_{11\sim}$
- Suitable for operation with frequency inverter

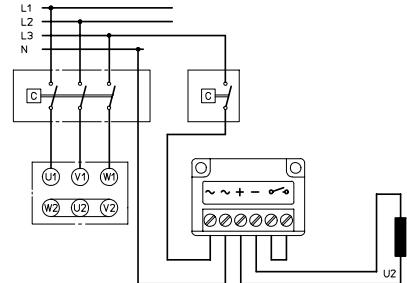

Figure 2: DC side switching

- The switching of the brake on AC and DC side leads to faster Engagement delay times $t_{11\sim}$.

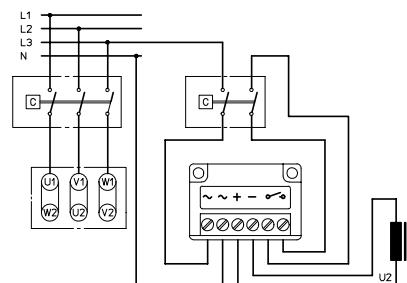

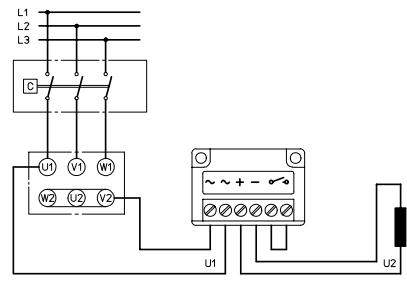

Figure 3: Brake ready for connection

- voltage supply from motor terminal board.
- The brake is switched together with the motor voltage, Engagement delay time $t_{11\sim}$
- In comparison to Figure 1 the connection to the brake is made within the motor terminal box
- Not suitable for frequency inverter operation and for pole changing motors with separate windings

RS - Backstop

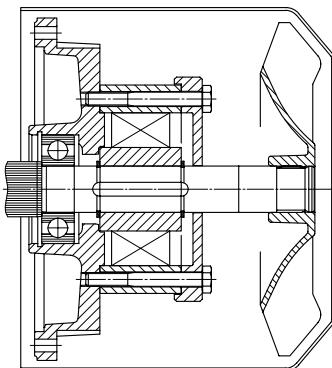

The mechanical backstop RS prevents the reverse motion of the drive when the motor is switched off.

Specify the direction of rotation of the motor or geared motor when ordering.
For Helical worm geared motors S and Helical bevel geared motors K, the position of mounting face has to be specified.
The backstop applies for ambient temperatures of $-40..+60^\circ\text{C}$.

Motor	Nominal locking torque 1) [Nm]	n_{\min} [1/min] 2)
DL63 RS, DL71 RS	16.9	875
DL80 RS .. DL112 RS	150	875
DA132 RS, DA160 RS	562	720
DA180 RS, DA200 RS	1025	610

1) maximum locking torque = 2^* nominal locking torque

2) the continuous operating speed shall not be lower than the minimum allowable overrunning speed

Motor-Options

F - Forced ventilation

In the standard version a forced ventilation is supplied with the following specification:

- Radial or axial air inlet
- Protection standard IP 66
- Standard voltages
DL63 .. DA200: 1 ~ 230 – 277 V, 50/60 Hz
3 ~ 220 V Δ – 500 V Y 50/60 Hz
- The connection is in a extra terminal box mounted on the fan cowl.

Motor	I_F [A]	I_F [A]
	3 ~ 230/400V 50Hz	1 ~ 230V 50Hz
DL63 .. DL100	0.23 / 0.13	0.23
DL112 .. DA132	0.24 / 0.14	0.27
DA160 .. DA200	0.59 / 0.35	0.84

I_F Rated current of forced ventilation

Motor protection

The following motor protection can be supplied:

TW - PTC thermistor sensor

TS - Thermorelay (closed)

I - Incremental encoder

In the standard version a incremental encoder is supplied with the following specification:

- Pulses/Rev. 1024
- Tracks A, B, 0
- Supply voltage 5VDC(+/- 5%)
- Current consumption 40mA / max. 90mA
- Permissible load / channel +/- 20 mA
- Protection standard IP 66
- Ambient temperature - 20°C ... + 50°C
- Interface RS422 (TTL)
- The incremental encoder is mounted under the motor fan cowl for added protection

1) Dimension for forced ventilation

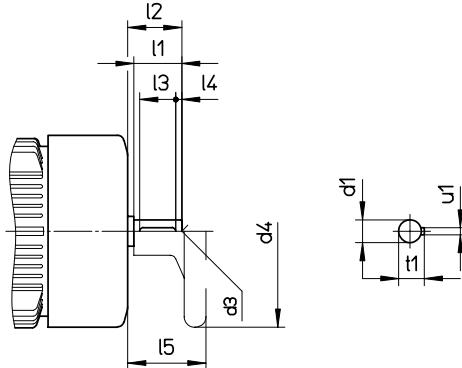

Second shaft end WE2 and handwheel

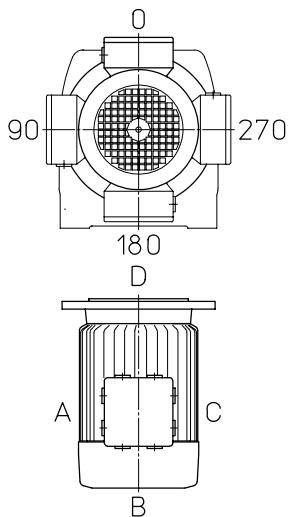

The second shaft end can be used for fixing a handwheel or for radial force free transmission of the motor torque.

If radial forces apply to the second shaft end, please consult the manufacturer.

Position of terminal box

Example: 270C is for terminal box at 270 cable lead in at C

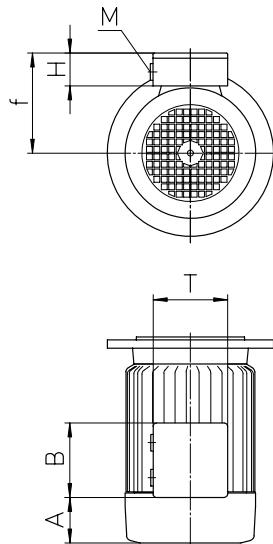

The position of other motor options (manual brake release, connection of forced ventilation, connection of encoder) is specified analogous, if different from position of terminal box.

Example: 90A, Manual brake release 270

More Motor Options

The following motor options are available on request.

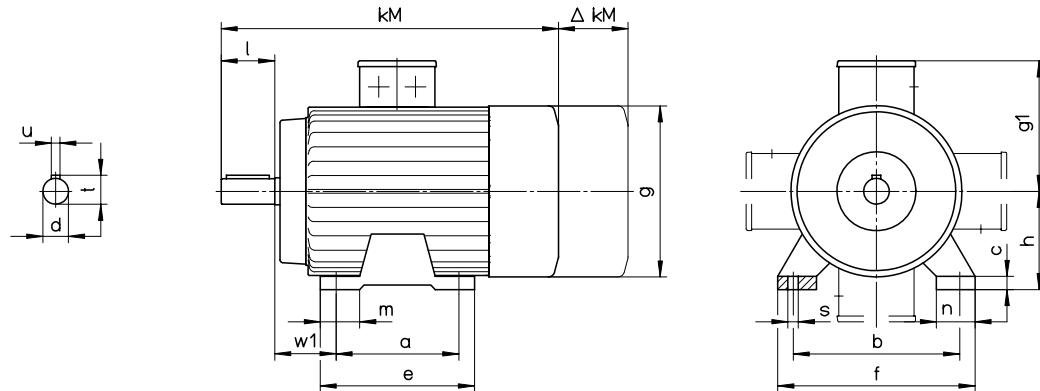

- Pole changing motors
4/2 pole; 8/4 pole; 8/2 pole; 6/2 pole; 12/2 pole; 6/4 pole
- Single phase motors, 0.12..1.5 kW
with service capacitor and increased resistance rotor Ma / Mn ca. 0.8
- Reluctance motors, 0.25..1.5 kW, 4 pole
The output speed of these motors is 1500 1/min and independent from the load (up to the nominal torque).
- Explosion proof motor in accordance with ATEX, for use in zone 1, 2, 21, or 22
- Flame proof Motor EExd
- motors with noise reduced brake or with double brake
